Solid Wood Grill Ceiling and Wall panels

Touched by Wood

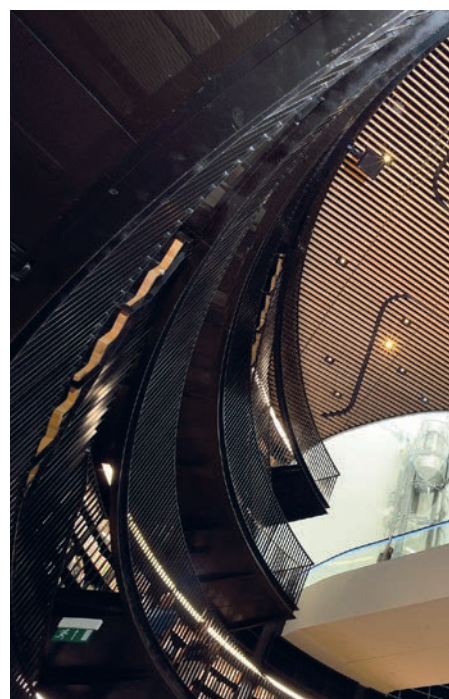

Project : Chirec LOT 23, Brussel, Belgium
Product : Solid Wood Grill
Architect: Assar Architects

The Solid Wood Grill range combines the benefits of the natural properties of solid wood with product flexibility and great looks. With wood in its most natural and authentic form, you have freedom in design which allows you to create the most remarkable ceilings and walls.

The Solid Wood Grill system consists of wooden slats connected to each other with an anodized black aluminum dowel. These assembled slats form the Grill element, which can be produced in various lengths. The grill panels are inserted into each other using a half-lap wooden dowel joint creating a continuous looking surface. The supplied elements made to measure, meaning the grill dimensions can be customized to match the design needs.

The grill panels are supplied with a special black Cross-Lock system and clips. This allows the installation to be easy and guarantees a perfect fit.

Wood species

Accoya

American White Oak

Yellow Poplar

Yellow pine

American Red Oak

European Oak

Cambara

Merbau

African Ayous

Siberian Larch

American Ash

European Pine

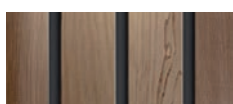

Cherry

Oregon Pine

Mahogany

Western Red Cedar

American Walnut

System features

- The innovative system ensures quick and invisible mounting
- A wide range of 15+ solid wood species, various systems and finishes
- Sustainable; a 100% CO₂ neutral building material
- The ultimate natural acoustic solution
- Fully customizable
- Integral guarantee for support systems, wood, finish and fire retardance
- High quality solid wood and finishing systems in certified and controlled production area
- Contribution to obtaining credits within BREEAM and LEED
- Certified: - Greenguard Gold
 - Cradle to Cradle
 - FSC
 - PEFC
- Fire classification B-s2,d0 (B-s1,d0 upon request for selected wood species)
- System for ceiling and wall
- Full service from schematic design to after installation support

Touch of nature

Each piece of wood has its own structure and characteristics and can behave differently. When selecting solid wood for a project you will find natural and authentic touches like growth patterns, notches and colour variations. These effects are typical characteristics of a solid wooden ceiling and result in a naturally beautiful and lively surface.

FSC, PEFC, LEED and Breeam certification

Hunter Douglas supports the use of FSC and PEFC certified wood, which also adds to your LEED or Breeam certification. Please contact us to see how we can comply to your local sustainability requirements.
